

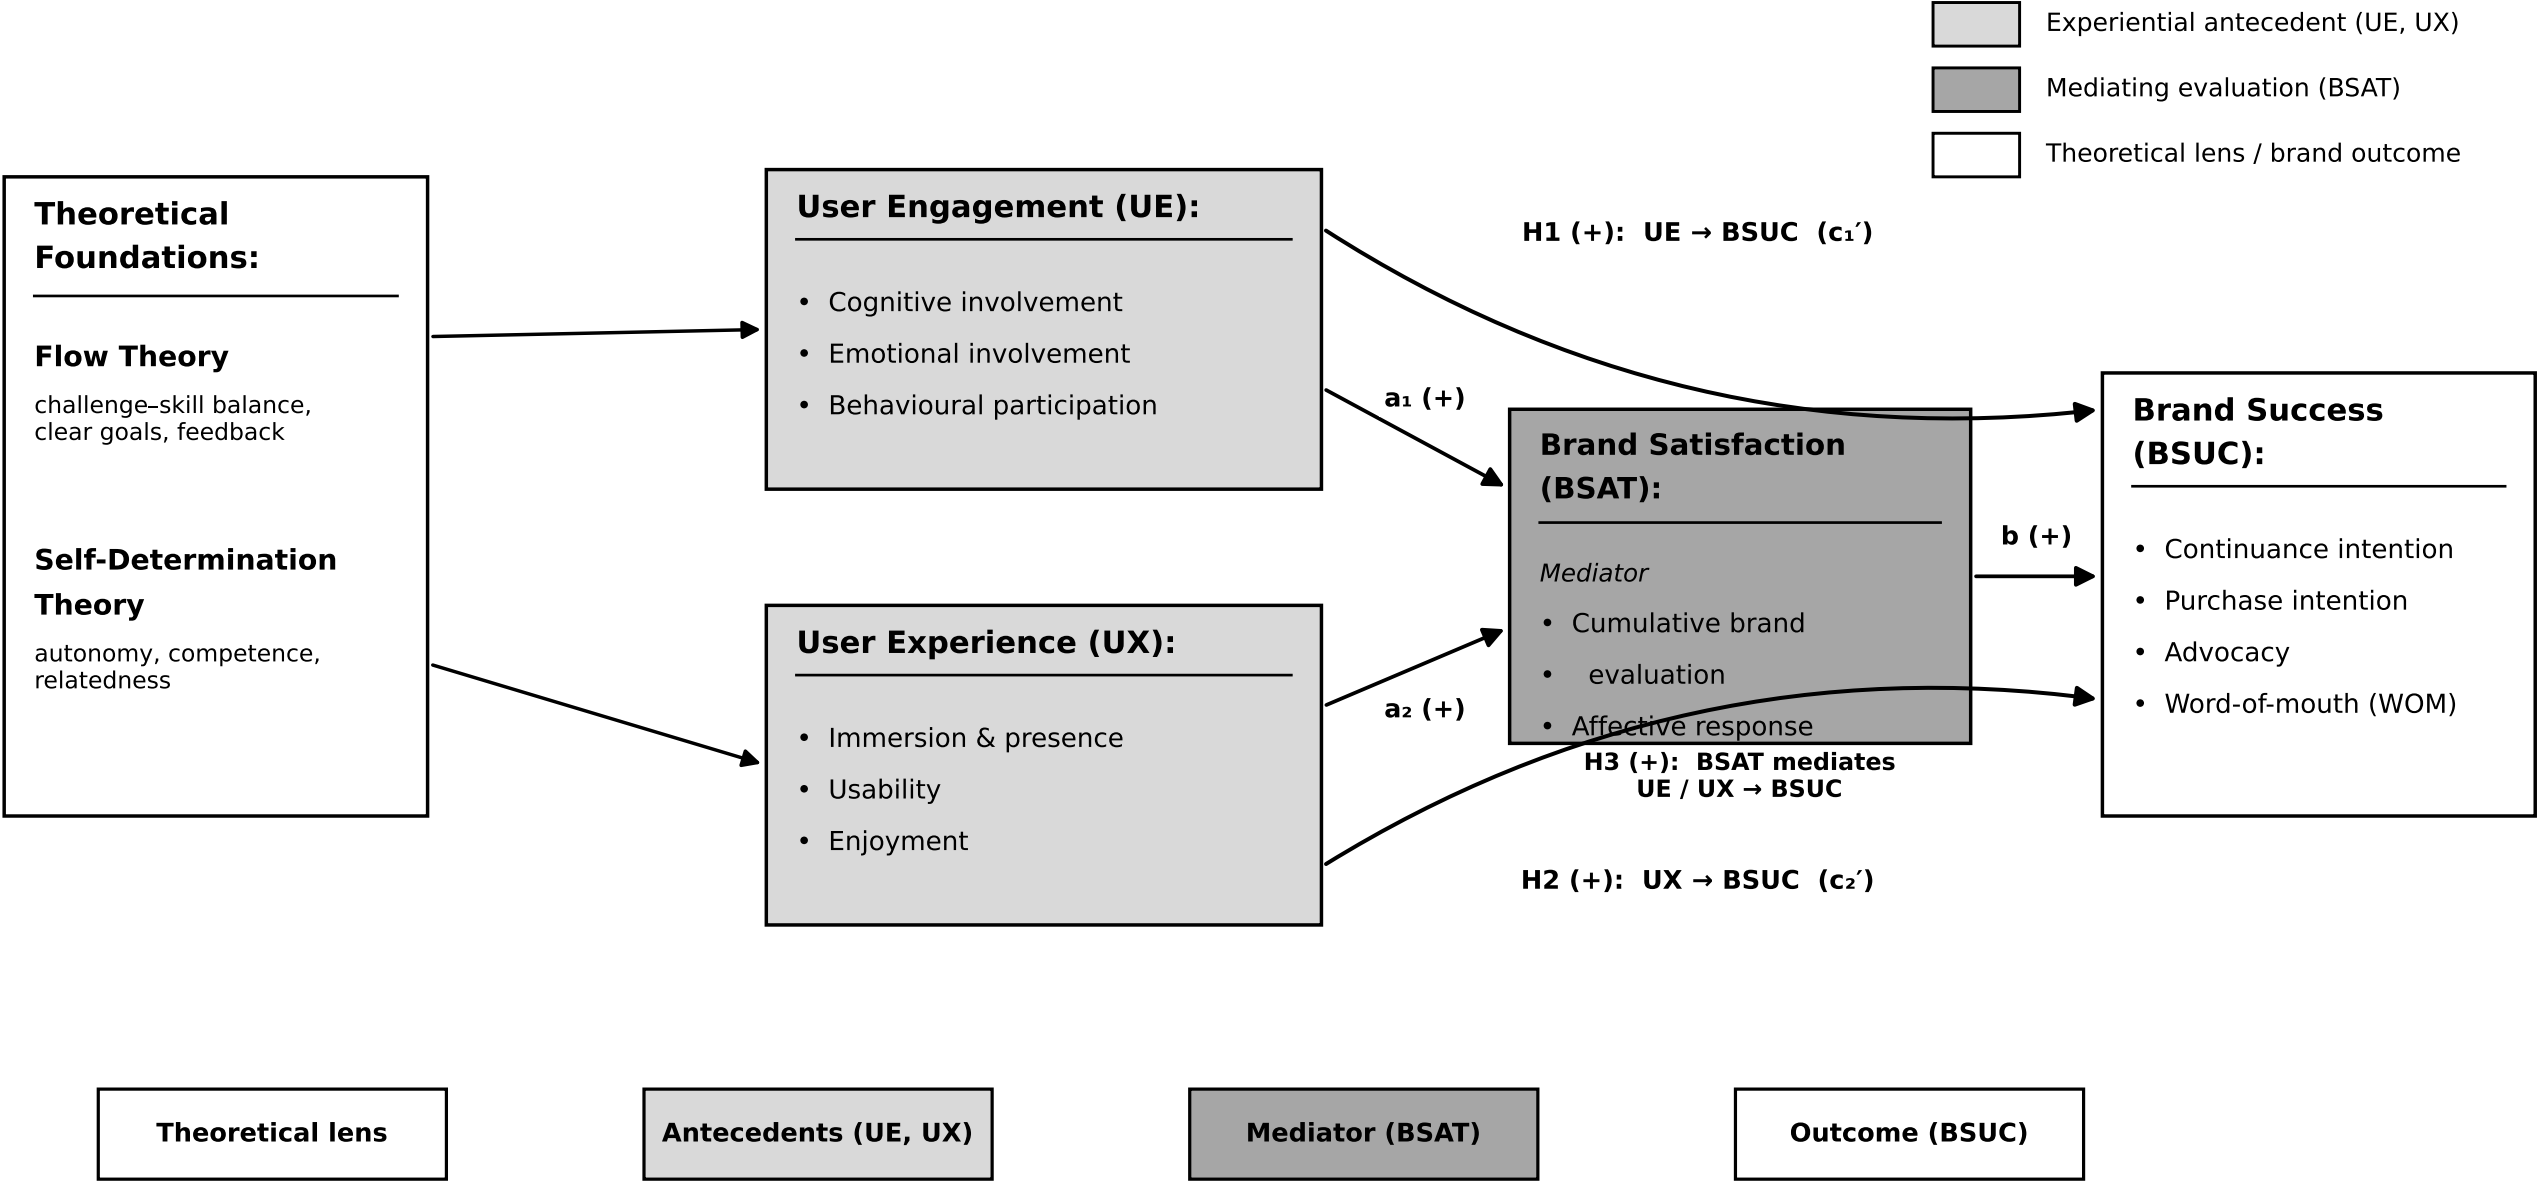

Figure 4. Conceptual model and hypotheses.

Notes. Solid arrows denote hypothesized positive relationships. Brand satisfaction is modelled as a mediator (H3) of the engagement/experience-success links via the indirect paths a_1b and a_2b ; c_1' and c_2' denote direct effects. P1 (equifinality): multiple sufficient configurations of UE, UX and BSAT can yield high BSUC, evaluated through fuzzy-set qualitative comparative analysis (fsQCA).
